

Do you enjoy the freedom of the clouds within your finance processes?

© BESTBRK/ISTOCK

Cloud strategies in finance processes are increasingly en vogue. Our well project experience with Clouds, e.g. LucaNet.Cloud confirms this. Clouds are now at par with the on premise world. Whereas clouds offer more freedom in flexibility with positive cost effects.

Secure, Uniform & Worldwide Solution

LucaNet.Cloud still offers a top-class finance performance management (FPM) solution, i.e. no functional differences to the on premise world. LucaNet only added the good attributes of a cloud like availability, security and flexibility to its FPM.

The service is hosted on AWS (Amazon Web Services). Thus providing a worldwide solution, operating with the highest degree of data security (Firewall, ISO certificates).

Maximize Data Security

The LucaNet.Cloud architecture contains the entire LucaNet server tier. Both LucaNet and their service providers T-Systems and AWS, comply with strictest security requirements and maintain powerful security testing & processes.

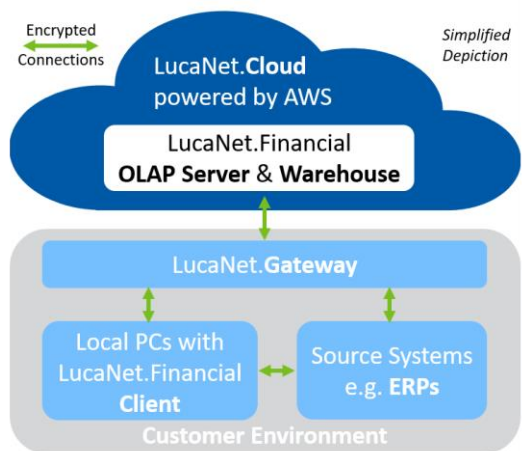

Let's make it simple

As a user you do not need to maintain the required infrastructure – reducing a lot of administration efforts. Thus saving time, costs and resources.

LucaNet.Cloud being a Software as a Service (SaaS) solution is

- stress-free to operate
- always available
- easy to scale
- a cost saver

If you want to enjoy the freedom of the clouds, please contact us!
